# MOLEMAXPLUS

DIGITAL DERMOSCOPY SOFTWARE

Enhance patient experience and cost efficiency

MoleMax Plus is a software package for dermoscopy which was specially developed for diagnostic processing with images captured from any dermatoscope using a compatible smart phone or digital cameras. Simple clinical and overview imaging makes trending and monitoring an easy task. MoleMax Plus runs on all the latest Windows operating systems.
- FREE 30 Day Trial
- Link to MoleMax GO app for easy record entry on the go
- Localise patient images easily using the Body Map
- Monitor the development of a lesion over time
- An All Skin diagnostic atlas with clinical references
- Integrated diagnostic aids such as the widely used ABCD rule & the Seven Point rule

- Compatible with a wide range of dermatoscopes with smartphone connectivity
- Free to use with MoleMax Plus or use as a standalone setup
- Link with Medical Director, Zedmed & Best Practice

An evolution in medical software

All Skin Diagnosis Library: Diagnosis can be selected by names and images showing various skin conditions.

Customised Patient Reports: Print images, patient data and history along with results from the scoring module.

Backup and Export: Easy backup of patient history, transfer or share databases between PCs in your clinic.

Minimum System Requirements:
Windows 7 or above, Intel i3 or above, Graphic Display Adapter Capable of 1280x1024 True Colour (24 or 32 bit), 100 MB free Hard Disk Drive space (800 MB with Mole Atlas), CD-ROM Drive.

Import Images Taken from Multiple Digital Sources
ABCD and 7 Point Rule Scoring and Measurement
Comparative Imaging and Follow-up
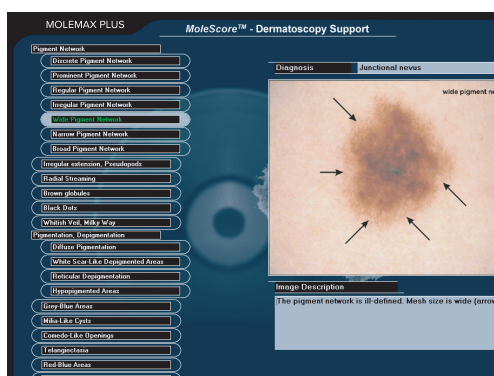

**Extensive Image Library of All Skin Diagnoses**

Body Map for easy lesion localisation

MOLEMAXPLUS

DIGITAL DERMOSCOPY SOFTWARE

Software Features

Data Back Up & Export:

The MoleMax and SkinDOC systems runs perfectly within most clinic networks. Data can be stored and backed up on a clinics' server. Where a spare server is not available, the MoleMax is equipped with ports for external backup. Patient images and files may also be exported from the MoleMax system into practice management software.

Real Time/Overlay Follow Up:

A quick comparison in large scale is one of the most important features Doctors look for in Skin Imaging software. A follow-up image may be taken with the previous image in view on one side of the screen.

Alternatively, an outline may be generated of the original image to allow for easier follow-up. Images over time may also be compared side by side or over each other to easily assist in recognising lesion alterations.

Multi-User Environment:

Our software is specially designed to operate in a multiuser environment to maintain audit paths and patient data security. The Administrator may tailor access rights for each user, to limit read, write and delete access.

Expertizer Plus Scoring Aid:

This manual scoring module is a histopathology database of diagnosed pigmented lesions taken on the MoleMax system.

This can be used for comparison scoring. This module includes image analysis functions based on state of the art technology using the clinically well-known ABCD Rule and Seven Point Checklist to support the classification of lesions being diagnosed.

The aid to diagnose will ask the user to answer each section of the ABCD rule and the 7 Point rule whilst provides example images to assist with diagnosis. The module will also auto measure up to 2 lessions taken over time to analyse pattern changes.
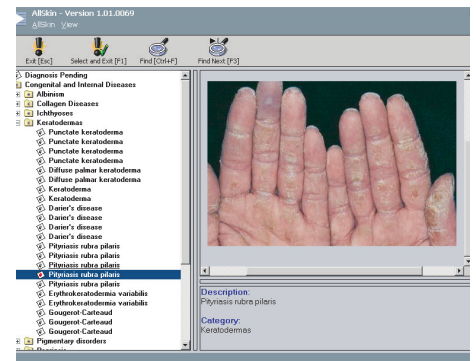

All Skin Library:

The All Skin module is a diagnosis library filled with images and descriptions which give the user the ability to browse and search for certain skin conditions. The skin conditions vary from melanoma to actinic keratosis, basal cell carcinomas and many more. The skin library features hundreds of them, including those not related to skin cancer.
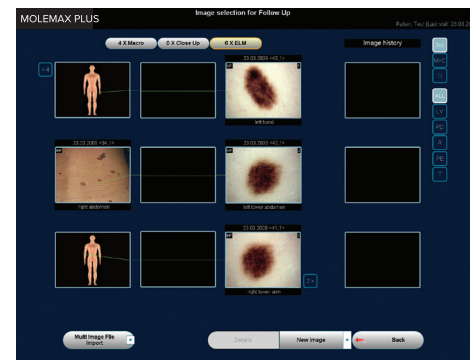

Trending and Monitoring:

Macro Trending allows for Micro and Histopathology images to be taken over time with comments. A complete patient history can be kept in chronological order every image taken and every comment added to the patient file.
